

# Seracal™

## Instructions for tube feeding flush

1 Measure  $\frac{1}{4}$  cup\* (4 fl oz/120 mL) of water into a 1-cup or larger cup/container

2 Add  $\frac{1}{4}$  cup\* (level) of fluffed (do not pack down) Seracal powder to the water

3 Stir with a spoon or fork

4 Mix with a whisk or immersion blender until the mixture has no visible clumps (typically less than a minute)<sup>†</sup>

5 Pull up mixed solution into a syringe and flush into the tube port

6 Flush the tube with water afterward to ensure all Seracal is pushed through the tube

\* If a smaller, more frequent flush bolus is desired, reduce to 2 oz (60 mL) water mixed with 2 tbsps of Seracal.

<sup>†</sup> If mixture sits longer than 3 minutes, mix again briefly.
