

# Seracal™

## Instructions for tube feeding flush

Measure ¼ cup\* (2 fl oz/60 mL) of water into a 1-cup or larger cup/container

Add ¼ cup\* (level) of fluffed (do not pack down) Seracal powder to the water

Stir with a spoon or fork

Mix with a whisk or immersion blender until the mixture has no visible clumps (typically less than a minute)\*\*

Pull up mixed solution into a syringe and flush into the tube port

Flush the tube with water afterward to ensure all Seracal is pushed through the tube

\* If a smaller, more frequent flush bolus is desired, reduce to 1 oz (30 mL) water mixed with 1 tbsp of Seracal.

\*\* If mixture sits longer than 3 minutes, mix again briefly.

If a patient is using RELiZORB®, we recommend flushing Seracal separately and not through its cartridge.
